Water Analytics AM-FOG App PII (Personal Identifiable Information) Statement

The AM-FOG App, by Water Analytics, does not share PII (Personal Identifiable Information) with third parties and No PII data is collected or tracked. The log files that can be downloaded to or manually transmitted from the users' mobile device from the App, will only contain the users' manually entered inputs, GPS location (if enabled) and the test data from the sensor.

For Android users, the app only has Google's Firebase crashlytics integrated into it, which provides information about the App crash event and provides information about the Android device model and Android version when the crash event is reported. This is similar on the iOS version as well.
